

20th Anniversary of ZEBET at BfR and 50 years of the 3Rs Principle

In 1959 the two British scientists William Russell and Rex Burch published the 3Rs Principle in their book "The Principles of Human Experimental Technique". The 3Rs encompass all scientific methods which meet at least one of the three requirements:

- The method replaces animal experiments (Replacement).
- The method reduces the number of experimental animals (Reduction).
- The method reduces pain and suffering of experimental animals (Refinement).

Thirty years later in 1989, the German government established the Centre for Documentation and Evaluation of Alternatives to Animal Experiments (ZEBET) to oversee the implementation of the 3Rs Principle in administrative and scientific procedures.

To celebrate the 20th Anniversary of ZEBET at Federal Institute for Risk Assessment (BfR) and the 50th Anniversary of the 3Rs Principle a two-day conference will be held in Berlin.

The aim of the symposium is

- to review the contribution of ZEBET to the 3Rs over the past 20 years and
- to discuss the future of the 3Rs in the 21st century around the world
